

ABSTRACT OF THE DISCLOSURE

The present invention relates to a novel treatment composition for use in treating food products and food intermediates. The treatment composition may be used in single, home use settings as well as commercial applications for larger scale treatment of food products in the course of manufacture. The treatment composition of the present invention uses at least one of alpha-cyclodextrin, beta-cyclodextrin, gamma-cyclodextrin or combinations and modified derivatives thereof along with a suitable carrier such as in an aerosol, liquefied mister and the like.
